User's Manual
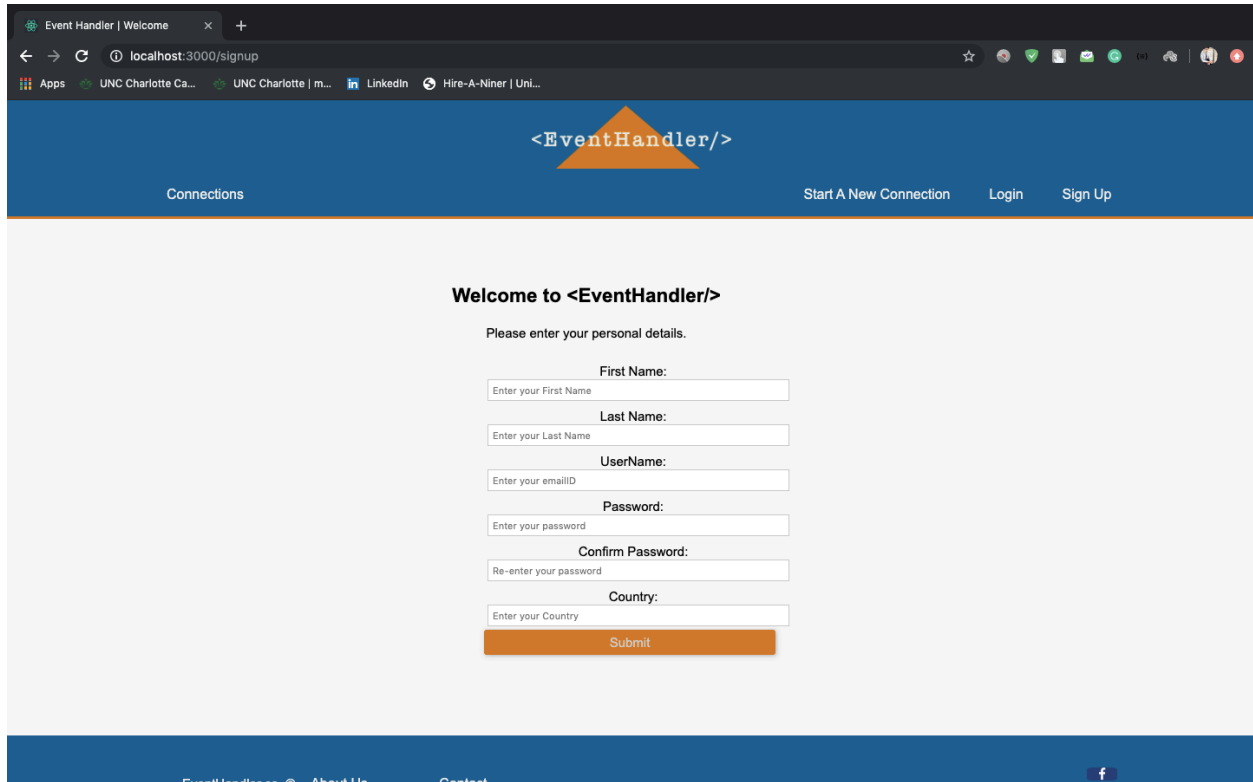

Content Table

Introduction

EventHandler is a web platform, where users can create new social events and other user can join the event by letting them by using the RSVP feature of the application. A user can create any social event of any category and also they can join any event created by other users.

This document lets user understand the platform and guide them through the process of using the application.
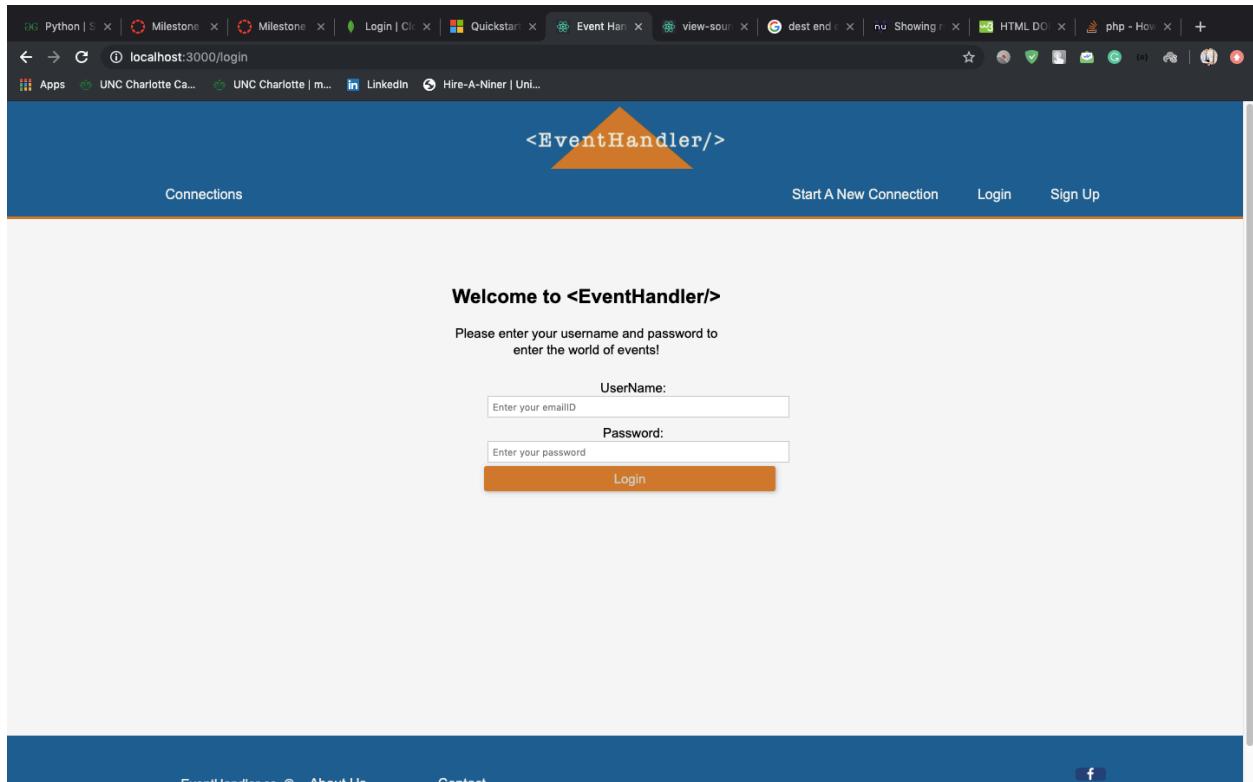

Sign Up

If a user is visiting the application for the first time and if they wishes to create and join events of their likings, they have to enter these many details to create their profile. User can reach this page by clicking on sign up button or join button on the homepage.

1. First and Last Name: Enter your first name and last name
2. Email ID: Enter your email ID which will be used as your username too.
3. Password: Enter your password which should be at least 8 characters long and contains both alphabet and numbers.
4. Confirm Password: Re enter the same password.
5. Country: Enter your country name

Login

When a new user has entered all the details in the sign up form correctly, they will be redirected to this page. Also, previously registered user can visit this page by clicking on login button.

After the user has entered correct email ID and password, user can advance to myConnections page.

If the user enters the details which doesn't match with our records, they will be shown an error text 'Invalid Email or password. Please try again'.

If the user is shown the able message and they haven't registered before, they have to visit the sign up page.

My Connections
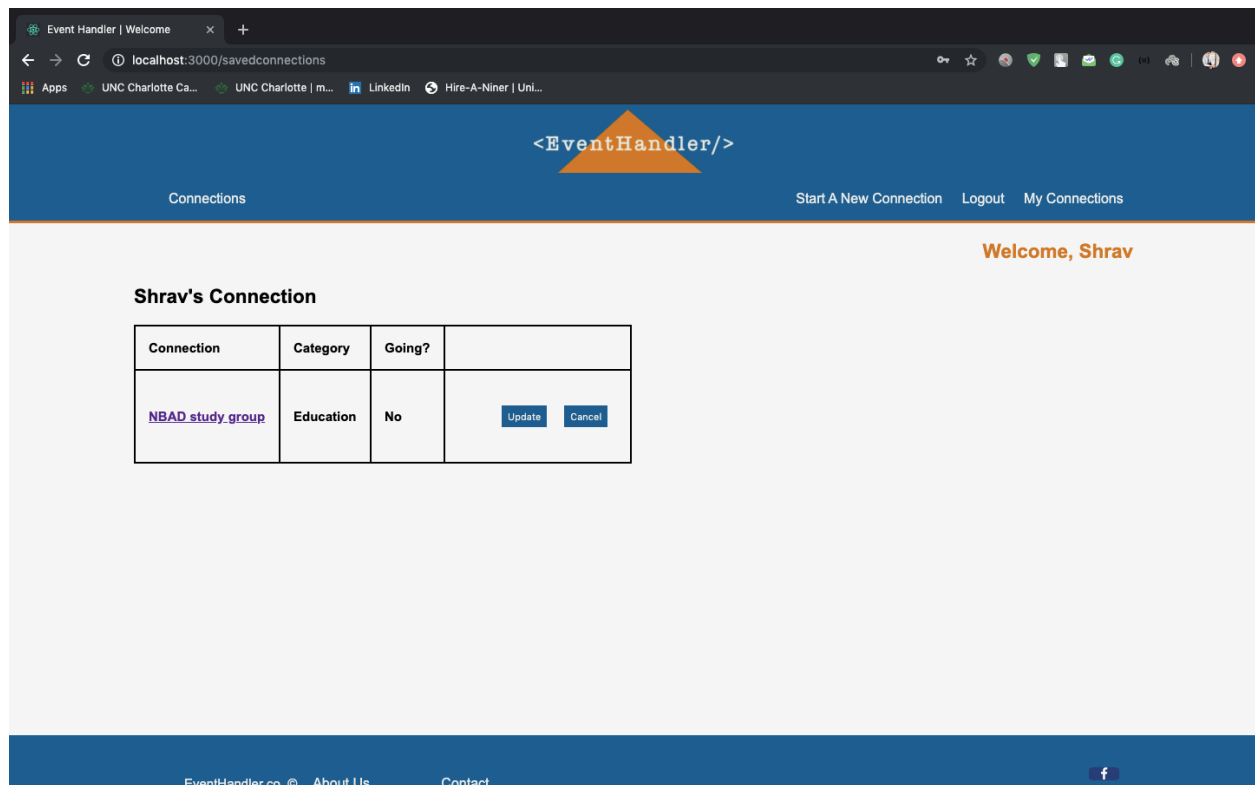

Once the user is successfully signed in, they will be redirected to this page where user can see their saved connections and can see if they are going(RSVP) to the event or not.

User can edit the RSVP by clicking on the update button which will land them on the connection page and they can change the value of RSVP and once they have selected it, they will be redirected to this page again. Also, user can delete the event and their RSVP value once they click on the cancel button.

Connections
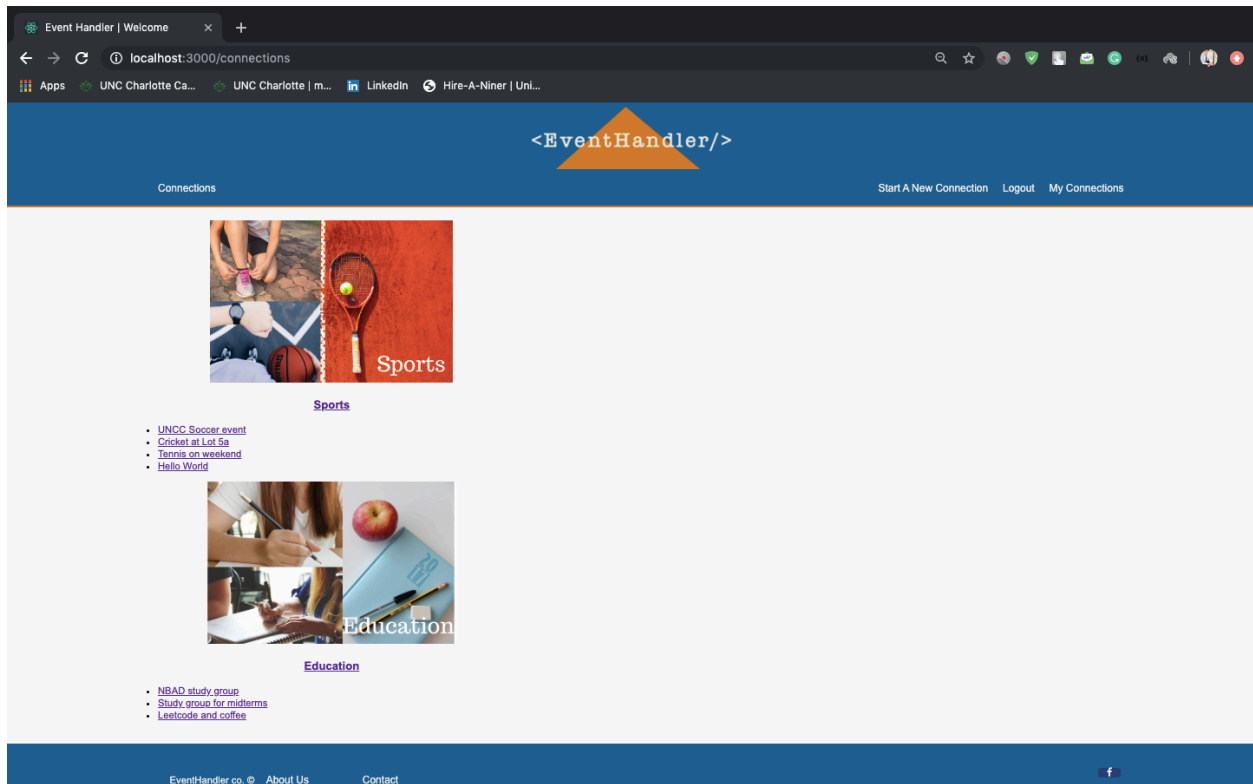

Users can visit this page with or without signing the application. They can see all the categories of the events and also the events in each category.

Once they wish to click on the event, they will be redirect to next page where they can see the details of the event.
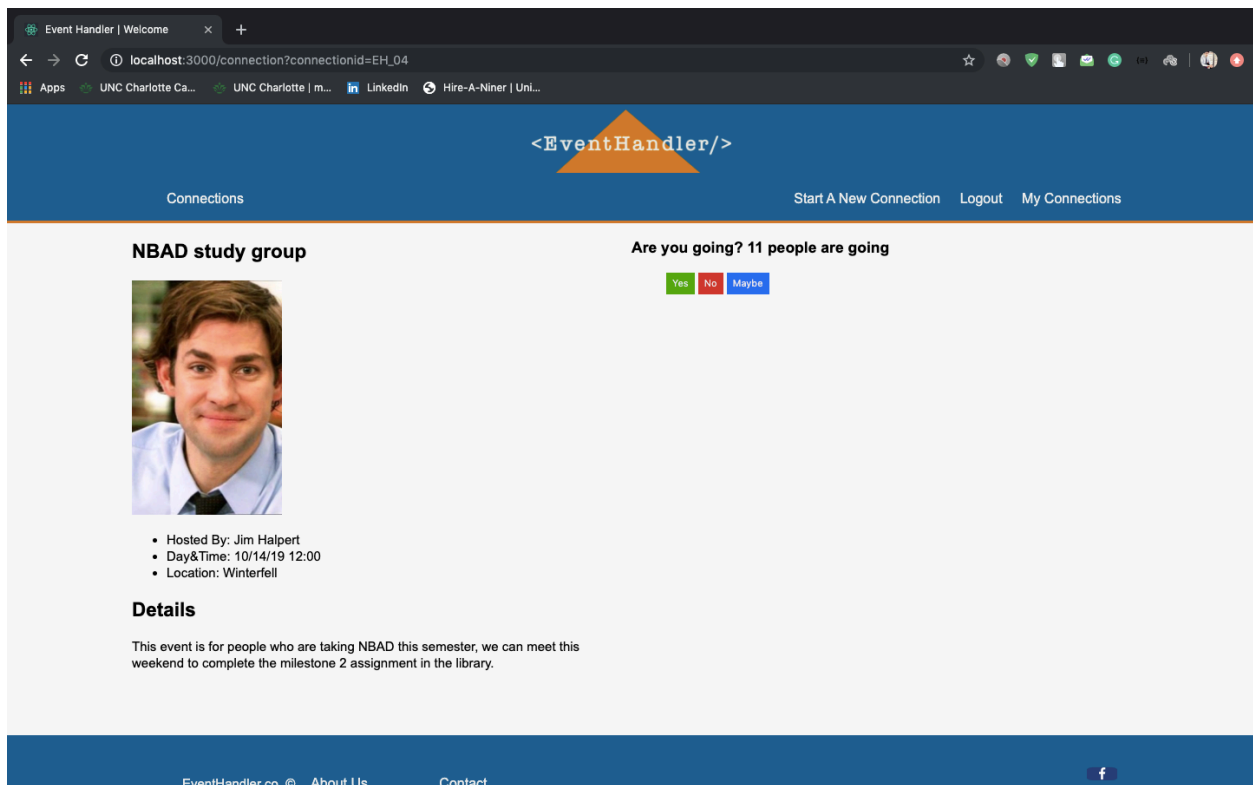

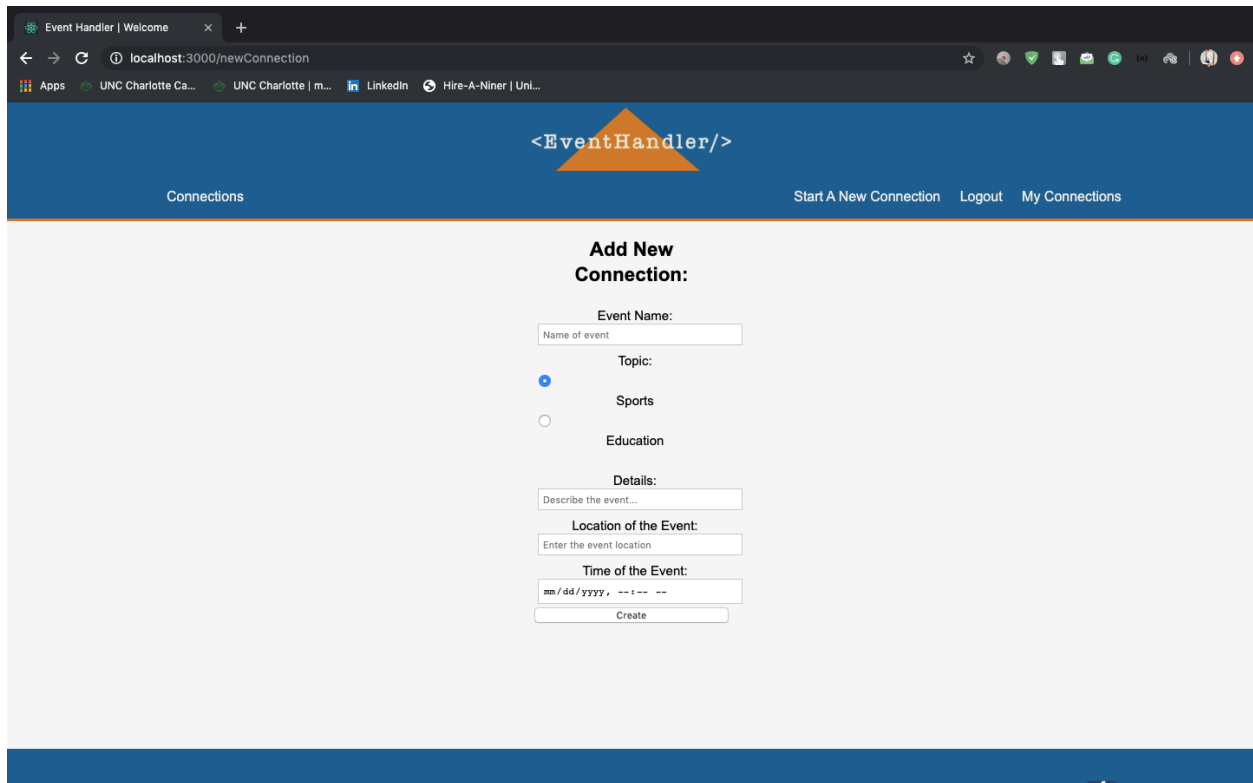

Connection Page

When the user selects on the event from the connections page, they will be redirected to this page.

User can see the details of the event(hosted by, details of event, location, host/event image, title of the event, date and time) and also they are given 3 options of RSVP.

1). Yes: when the user selects on the yes button they are registered in the database as a user who will be attending this event.

2). No: when the user selects on the no button they are registered in the database as a user who wont be attending this event.

3). Maybe: when the user selects on the no button they are registered in the database as a user who is not sure if they will be attending this event or not.

Start A New Connection

When the user wishes to create a new event they can do so by clicking on start a new connection button after signing the application.

Users have to enter few details to start an event:
1. Event Name: Title of the event
2. Topic: select the category of the event
3. Details: Enter the description of the event
4. Location of the event: Enter the location of the event
5. Time of the event: date and time of the event

Once the user click on the create button, the event will be created and will be displayed on the connections page under the selected category/topic.

Edit User Connection
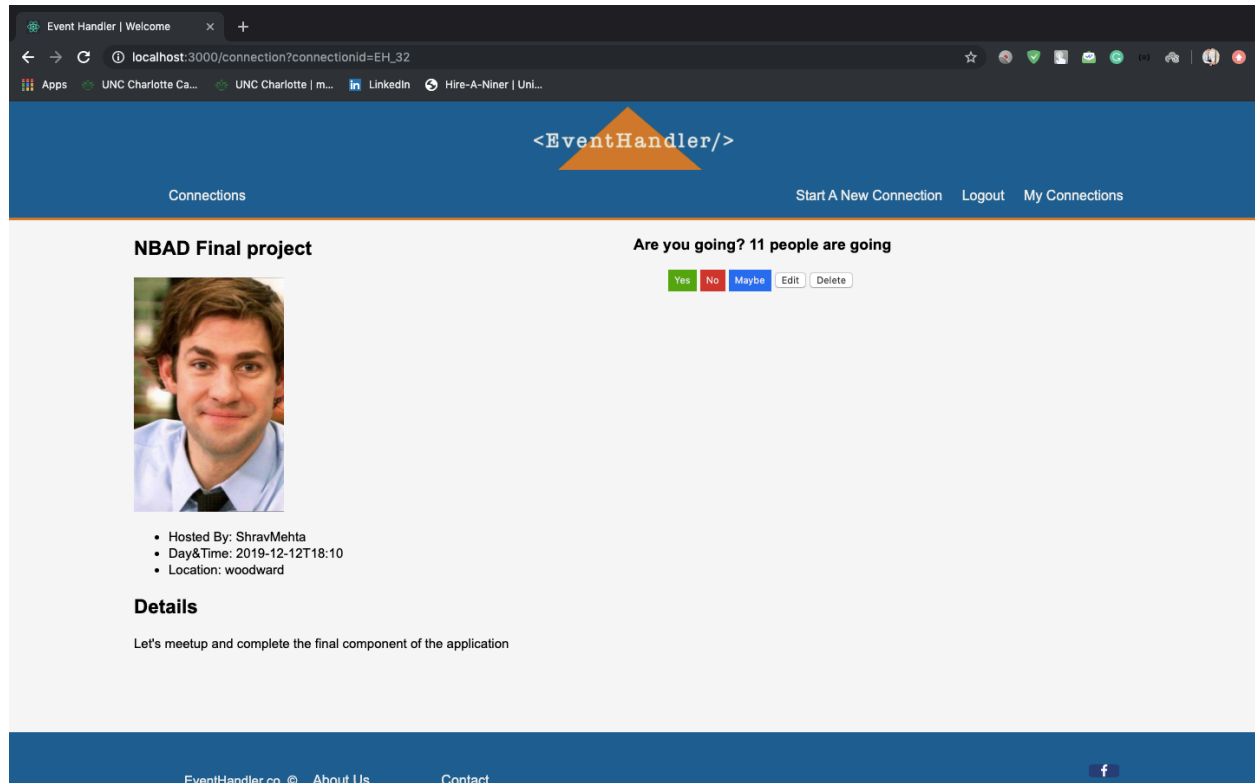

When the owner of the event visit their connection page, they will be displayed two extra buttons which will allow them to edit/delete the connection.

When the user clicks on the edit button, they will be redirected to the edit connection page where they can edit the details of the connection and once the user clicks on the update connection information, the information will be updated and they see the changes on the connection page.

When the user clicks on the delete button, the connection will be deleted and they will be redirected to the connections page where they can see that their connection is deleted.
